

Pursue Disinfectant Cleaner

Protecting Against the H1N1 Influenza Virus and More

Pursue®

Help from Pursue Broad Spectrum Disinfectant Deodorizer

The recent global outbreak of H1N1 influenza virus (swine flu) has highlighted the importance of proper hygiene, including the cleaning and disinfecting of hard, nonporous surfaces.

The U.S. Environmental Protection Agency (EPA) has recently noted that products currently registered for use against the influenza A virus will also be effective against the 2009-H1N1 flu strain, as well as other influenza A virus strains, on hard, nonporous surfaces.

Amway's PURSUE® Broad Spectrum Disinfectant Deodorizer (EPA Registration Number 44446-67-6718) is effective on influenza A virus and therefore is considered to be effective on the H1N1 virus.

Cleaning of hard, nonporous surfaces as well as porous fabric surfaces with disinfectants like PURSUE Broad Spectrum Disinfectant Deodorizer can further limit the spread of viruses and bacteria.

For safe and effective use of this product, and to further limit the spread of these viruses and bacteria, carefully follow all label instructions.

PURSUE Broad Spectrum Disinfectant Deodorizer is not by itself an appropriate method of protection against viral or bacterial illness.

According to the Centers for Disease Control and Prevention, a good hygiene program is essential in minimizing the risk of contracting or spreading any communicable illness. Your first line of defense is thorough and complete hand washing with soap and water.

For up-to-date information on what to do to protect yourself and your family from communicable diseases or airborne pollution, consult your doctor or local health department, and follow any relevant public health advisories.
